

E-Commerce Backend Project Documentation

Name: Sakshi Sorte
Intern ID: CITS1852
Internship: Python Programming

Conclusion:

This project successfully implements an e-commerce system with essential features such as product management, user registration, shopping cart, and order processing. It provides a solid foundation for building a scalable and user-friendly online shopping platform. Future enhancements can include integrating payment gateways, implementing advanced search functionality, and improving security measures to ensure a seamless and secure shopping experience for users.
